

CIRQUE CHANDELIER SKYLINE COLLECTION

BY GIOPATO & COOMBES

Lamps with slender thread-like structures in brushed brass, that change form to create infinite geometric compositions. The figure, suggesting circus gear, is interrupted by capsules that project continuous light. Each capsule, made in ribbed glass with extremities in brass, crafted with a lathe using a very refined technique that starts with a solid block of the material, conceals light guides used in the automotive sector that make it possible to connect the LEDs contained in the ends of the capsule, conducting the light along the entire length.

Material Options

Materials
brass
borosilicate glass

Finishes
brushed brass

Lamping

Proprietary LED Source
9W 2700K 500mA per ligh
