

DORVAL ATELIER 01

BY LAMBERT & FILS

The Dorval Atelier 01 looks like it was dipped in a pool of metallic liquid, making it an utterly refined, almost magical version of the impressively technical original model. Entirely made of brass, the Dorval Atelier stuns by stripping down and glorifying the process of making such a piece. Brass is a lively material which morphs with time, and ages elegantly. This model aims to be an ode to our most-used material, juxtaposed here on one of our most contemporary models.
