

EQUALIZER 5 PIECE LINEAR

BY LADIES AND GENTLEMEN STUDIO

Equalizer was conceived as an exercise in the defining architectural spaces. Taking inspiration from a room divider, the collection's vertical framework undulates through an environment delineating areas through positive and negative space.
The system's modularity enables custom scaling, positioning, and finishing to create a result that integrates with the architecture. Fixtures are crafted to order using hand blown glass by artist and regular collaborator John Hogan, and are available in both monochromatic satin-colored glass, as well as a special chameleon color which subtly changes depending on lighting conditions and viewing angles. All globes have a satin luster exterior finish.
This pendant configuration contains five globe lamps arranged in an undulating row on a single rectangular canopy.
Custom configurations and multi-piece screens available upon request

Dimensions

height variable (46" recommended by Ladies & Gentlemen Studio), 48" x 10" rectangle canopy
