TREELINE

BY STICKBULB

TREELINE is the first consumer product to be made out of salvaged trees from NYC's urban forest. Over 12,500 trees are removed in NYC every year. In the past, these trees were chipped. We are working with the NYC Parks Department and other urban forestry partners to divert this wood from the waste stream and utilize it in TREELINE. We offer three iconic wood finishes – black, natural, and white – to celebrate the unique and rich texture of this storied material.
